

UNIVERSITY OF RUHUNA

Faculty of Engineering

Department of Electrical & Information Engineering

Module Number: EC6204

Module Name: Information Security

Mini Project - Group
[20 marks]

Common Instructions:

- You need to select an information security related algorithm taught in the class and propose a modification (improvement) to that algorithm. Using software, you need to experimentally prove that modification is really an improvement over the existing algorithm chosen, using appropriate metrics.
- Two groups should not select the exact modification. However, they can select the same algorithm.
- You should submit a one-page project proposal specifying the title, objectives, scope, and problem statement within one week.
- Final evaluation will be a presentation and viva. All members should present.
- You are given 1 month of time to complete the project.
